

# RESIDENTIAL NEURO REHABILITATION SERVICES

In FY23 (July 1, 2022 - June 30, 2023), On With Life's Residential Neuro Rehabilitation Program served 8 individuals. This program is focused on working with individuals who have sustained a brain injury as they learn strategies to support their return home and to their communities. Since its development in 2018, the program has served 28 individuals with an average length of stay of 245 days.

(n) = 28

**REASON FOR DISCHARGE**  
(n) = 28

**AVERAGE GOALS PER PERSON SERVED**

**53%**

SHOWED SIGNIFICANT OR ROBUST IMPROVEMENT

**The Mayo-Portland Adaptability Inventory (MPAI-4)**

The Mayo-Portland Adaptability Inventory (MPAI-4) items represent the range of physical, cognitive, emotional, behavioral, and social problems that people may encounter after acquired brain injury. MPAI-4 items also provide an assessment of major obstacles to community integration which may result directly from ABI, as well as problems in the social and physical environment. This outcome measure, which has been in use for several years at On With Life, has given us the ability to look at trends and condition specific results.

**Supervisory Rating Scale (SRS)**

The Supervisory Rating Scale (SRS) measures the level of supervision that a person served receives from caregivers. The SRS is widely used in brain injury rehabilitation and allows us a more in-depth view of the 82% of our persons served who are discharging to a home setting. It not only allows us to measure change to supervision needed for caregiving from admit to discharge, but also allows our therapists provide better transition to the home environment based on the level of support needed.

On average, each person served demonstrated .3 pt improvement on the SRS
